

Candidate Qualification Assignment

Test Automation

V1.1

Mark Barzilay

Given

1. Environment and specs: <https://petstore.swagger.io/>
2. Required scripting language: Ruby, Python, JS or Java
3. Required testing tool: free of choice
4. CI platform: free of choice

When

1. You have automated all the Petstore API endpoints
 - a. positive and negative scenarios are included
2. You managed to run the tests in a CI/CD environment
3. You share the codebase through github or gitlab
4. You add a results folder to the repository including a result report (html,json,xml,etc)
5. Manage to upload the test results to calliope.pro and share a link to the results.
6. The codebase has a readme.md file explaining:
 - a. How to run the tests locally
 - b. How to run the test in a CI/CD pipeline
 - c. Has a link to the results in Calliope.pro
7. You nail the interviews

Then

- You have a new job at spriteCloud!
